

BIG DATA & AI DRIVING ENERGY SERVICES FOR ANALYTICS SECTOR

ABOUT BEYOND

The project develops a Big Data Management Platform along with an advanced AI analytics toolkit allowing the of delivery and utilization of real-life building data and relevant data coming from external sources.

The novel bundle of big data and AI technologies enable the realization of data-driven optimization functions with the scope to support energy actors in gaining informed decisions and exploring new business opportunities.

The project's results are tested in 4 large-scale demonstrators involving (i) data collection from diverse building typologies, data sources, building systems and devices, and (ii) data intelligence sharing with various market actors.
